

Cleaning your iron's soleplate

This week's tip is for cleaning the sole plate of your iron! I was playing around with some different cleaning options and decided to try a wet Mr. Clean magic Eraser and voila! Like butter and I didn't even have to touch it. You can clean it multiple times with just one eraser.

Here is the how-to:

- wet your magic eraser enough so that it is wet all the way through
- place the magic eraser over a folded towel to protect your surface
- heat up your iron and swipe it over the magic eraser
- no fumes, no burns, and a clean iron!
